

METHOD FOR CONTROLLING  
ACCESS TO MEDICAL INFORMATION

5

ABSTRACT OF THE DISCLOSURE

A system and a method for controlling access to patient medical  
10 information through a networked aggregate medical server are provided. Patient  
medical information is received at the server. Patient access instructions are  
received at the server. An access request for medical information is received at  
the server from a requestor. Correspondence with the access request and the  
patient access instructions is determined. A portion of the medical information is  
15 sent to the requestor based on the patient access instructions if the access  
request and the patient instructions correspond.
